REDBIRD RELEASES REDBIRD PRO TO THE APP STORE AND GOOGLE PLAY

The new app delivers personalized proficiency training and tracking to pilots at home and on the go.

Austin, TX (February 25, 2022) – At the 2022 Redbird Migration Flight Training Conference, Redbird Flight (Redbird) released its much-anticipated proficiency training app, Redbird Pro. Developed for use with iOS and Android devices, the app uses artificial intelligence and behavioral design to personalize the proficiency training of pilots and make the daily improvement of their knowledge and skills more achievable, enjoyable, and effective.

When pilots first download Redbird Pro, which they can do today in the App Store or Google Play, the app prompts them to complete a self-assessment and, if able, a baseline flight using a Redbird flight simulator. Redbird Pro uses this data to generate a Pro Score™, which is at the core of a pilot's personalized training plan in the app.

As pilots train with Redbird Pro, their Pro Score gives them an objective measurement of their progress and identifies where and how they can improve their proficiency. It includes a broad overview of their training activity and allows them to drill into specific skills and tasks, how much training time they should allot to them, and how they score for them relative to their baseline proficiency and objective. The app automatically incorporates pilots' training data and knowledge decay (a metric that evaluates the impact of training frequency on proficiency) into their Pro Score, giving them a realistic and evolving view of their proficiency level.

Based on a pilot's Pro Score, Redbird Pro recommends the training that will have the most impact on proficiency. The app includes an extensive catalog of training collections, each one developed to help the pilot improve knowledge and skills in specific areas through articles, quizzes, skill refreshers, and flight simulator scenarios created and curated by expert flight instructors.

Pilots do not need access to a Redbird flight simulator to use Redbird Pro; they can read articles, watch videos, take quizzes, and brief, chair fly, and debrief scenarios with nothing more than a mobile device or tablet. However, flying scenarios with a Redbird simulator enables Redbird Pro to incorporate additional data into the Pro Score, which enhances pilots' personal training plans and allows them to drill even further into the minute details of their flying.

A subscription to Redbird Pro costs $15.99 per month for VFR training or $19.99 per month for VFR and IFR training. A 30-day free trial period is included with each subscription. For more information about Redbird Pro, please visit https://simulators.redbirdflight.com/redbird-pro.
